

Thematic Working Group on Energy Transition

Energy transition from fossil fuels to renewable sources is key to fighting climate change and its impacts, driving innovation, economic growth, and job creation while enhancing energy security.

A collaborative approach to adoption can help lower carbon emissions, promoting a sustainable future through integrating policy, technology, and stakeholder involvement for a smooth shift, considering regional needs for a fair transition.

MAIA is exploring the possibility of establishing a Cluster Group on this topic. The Group would comprise representatives of climate research projects and initiatives beyond Europe and selected counterparts from European projects.

The intention is to provide a new space for open exchange and friendly interaction to uncover opportunities for learning and exchange. Particularly on how certain climate research and policy aspects might be perceived, handled, and/or prioritised differently in other regions of the world.
